

TLF Graphics Invests in PECAS Vision ERP/MIS Software to provide Technologically Advanced Solutions to Customers while Streamlining Business Operations.

Flexo label and specialty printing company partners with Radius Solutions to provide world class capabilities and service to customers

Chicago, IL, USA, June 4, 2010 — Radius Solutions Ltd., the world's largest Enterprise Resource Planning (ERP) software provider focused exclusively on the packaging industry, announced that TLF Graphics has selected PECAS Vision Enterprise Resource Planning software in support of the converter's strategic business objectives.

Headquartered in Rochester New York and founded in 1980, TLF graphics has built a solid reputation for high quality pressure sensitive labels, labeling systems and screen printed product. Utilizing flexography, screen and digital printing processes, TLF Graphics is primarily focused on product decoration and informational labels that are designed to ensure survival through a number of rough environments, from water and oil to extreme temperature.

TLF Graphics has an unwavering commitment to customer service and constantly invests in state-of-the-art technology to support its vision. They have been moving into technologically advanced digital printing and expanding their web services. As the company has been growing and adding new equipment and processes, they required a new Enterprise Resource Planning (ERP) system to tie together all the systems and processes to improve efficiency, reduce costs and provide capabilities for clients such as 'on demand' printing and instant access to information regarding inventory and order status.

The company thoroughly evaluated several industry specific ERP systems providers before selecting Radius Solutions and its PECAS Vision system. "The way they do scheduling is far superior to anything we saw out there, and the estimating could handle flexo, digital and screen all in one application. We also found the Business Intelligence capabilities to be very exciting," said Aaron Burton, Director of IT at TLF Graphics. The ability to see profit levels and make informed, effective decisions using real time was also an important consideration.

TLF Graphics will be implementing the entire PECAS Vision application suite including; Estimating, Order Handling, Production Scheduling, Materials Management, Shop Floor Data Collection, Intervention Web Portal, Customer Relationship Management, Quality Management and Business Intelligence.

"We may not be one of Radius' biggest customers, but Radius is huge to us. It was a big decision and we were so positive about it that we decided to make the investment. We know that with your company as a partner we won't be looking for a new system in five years time," said Ron Le Blanc, Vice President of Finance at TLF Graphics.

"Radius Solutions is in lockstep with TLF Graphics – expandability, capability, full integration and state-of-the-art technology", said Mr. Burton. We are delighted to have TLF Graphics join our growing list of clients. They are a rapidly growing organization and PECAS Vision will give them the foundation to grow in revenue without growing in additional costs, since they will be better leveraging their existing resources", said David Taylor, President and CEO of Radius Solutions.
